

Orion Powers

Software Engineer • Melbourne, FL • U.S. citizen

(502) 232-8043 • orionthanhpowers@gmail.com • linkedin.com/in/orion-powers • orionpowers.com

Education

Florida Institute of Technology | B.S. Computer Science

Expected Dec 2026

Dean's List • Florida Tech Academic Scholar • FITSEC cybersecurity team

Work Experience

Modus Operandi | Software Engineer Intern

Oct 2024 – Present | Melbourne, FL

- Built a reusable Angular/GoJS graph component that lets analysts inspect LLM-generated SPARQL queries, results, and source relationships; integrated interactive query tracking, source-data views, and multi-level filtering into a shared visualization library.
- Served as lead UI engineer for intelligence targeting and Air Force training applications, collaborating with full-time engineers to ship production Angular/TypeScript features using AI-assisted development, formal code review, and CI quality gates.
- Led a Figma-to-Angular redesign of an intelligence study-management workspace, building portfolio dashboards and task-management views; integrated Flowable APIs to update priorities, due dates, assignees, and task status across the workspace.
- Upgraded a logistics application from Angular 19 to 21, resolved 9 dependency CVEs through dependency overrides, and raised line coverage from 78% to 98%; validated the application in Docker and cleared Bitbucket CI/CD quality gates.
- Integrated live backend APIs into 12 Air Force training dashboard widgets using Angular and RxJS; implemented Keycloak/JWT authentication, token refresh, session activity tracking, and role-based views for students, instructors, and commanders.
- Fixed parsing and aggregation defects so intelligence-study banners consistently showed the highest visible classification.
- Selected for on-site work with the Air Force's 363rd ISR Wing at Joint Base Langley-Eustis; collaborated directly with intelligence analysts to refine workflows, translate feedback into requirements, and deliver reviewed interface changes within days.

Hyperformant | Software Engineer Intern

May 2024 – Oct 2024 | Dallas, TX

- Independently delivered SaaS features from Figma mockups through deployment on a small team, integrating React/TypeScript interfaces with Node.js/Express REST APIs, Supabase/PostgreSQL data services, and OAuth 2.0 authentication.
- Redesigned a marketing website with Figma, Three.js, Webflow CMS, and Supabase to improve performance and search visibility.

RARE T Holdings | Software Engineer

Dec 2022 – Jun 2023 | Los Angeles, CA

- Built a document-processing pipeline with Azure Machine Learning models, Python/scikit-learn, and Java Spring Boot to automate invoice handling and document classification; doubled accounting throughput and achieved 99% classification accuracy.
- Automated content generation and notifications with the ChatGPT API and Power Automate, raising generation efficiency by 30%.
- Automated SharePoint approval workflows using Power Automate cloud flows and Power Apps, reducing approval cycle time by 40%; implemented status notifications and document versioning to track changes throughout the approval process.

Selected Projects

BrainBench | Model-Agnostic LLM Reasoning Platform

2025 – 2026

- Engineered a model-agnostic platform for investigating local LLM reasoning, behavior, and performance; co-authored a research paper under peer review and presented findings at the Northrop Grumman Engineering & Science Design Showcase.

LLM-Powered Network Analyzer | Local Security Analysis

2025

- Built a local AI-assisted network-security monitoring system with Scapy and FastAPI to detect six anomaly classes; triaged traffic before local Ollama inference and streamed plain-language, actionable findings to an Angular dashboard in real time via WebSockets.

Technical Skills

Languages: TypeScript, JavaScript, Python, Java, C++, SQL, HTML, CSS/SCSS, Bash

Frameworks & Data: Angular, React, Next.js, RxJS, GoJS, FastAPI, Node.js, Express, PostgreSQL, Supabase, scikit-learn

Tools & AI: Git, Bitbucket CI/CD, SonarQube, Docker, Azure ML, Power Automate, Ollama, Claude Code, Codex, MCP, Figma

Leadership & Involvement

Computer Science Networking Society (CSNS) | Founder & President

Drone Club | FPV Division Executive • Pi Kappa Alpha | Community & Philanthropy

Professional Reference

Ken Stephens | Program Manager for PAiGE, LOGEN & POMML, Modus Operandi • KStephens@modusoperandi.com • (405) 255-3995
